FEATURES:

- » Environmentally friendly zinc material.
- » Premium quality plating finish.
- » High grade durable painting.
- » VMC Hi carbon treble hook with attractive 2 colour plastic drop and shiny glitter flakes.
- » Stainless steel split ring.
- » Raptor has its own unique special swim characteristics.
- » The Raptor falls in water with free unrestrictive manner, swaying and rolling back and forth gracefully to the depths below.
- » The weighted body and curved shape allows the Raptor to be raised in a curving angle when lifting up the Raptor. This sets up the position nicely for the next fall.
- » Available in 5 different sizes for all depths of water.

KENO

SUPREME 'KENO'

Keno is "a must have lure" for your fishing tackle armoury. Jigging enthusiasts will quickly find the rich rewards of jigging with the Keno. This jig is trending the modern approach to jigging and offers more choice to be fished all year round. So whether you are casting from a boat or from the shoreline or fishing through-the-hole-in-ice the Keno is a brilliant player!!

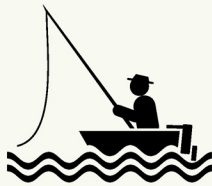

7 cm | 19 g

KENO	
Size	Weight (appr.)
7 cm	19 g

TIP FOR KENO ICE-FISHING:

When Ice-fishing through-the-hole-in-the-ice allow the jig to freefall to the bottom. The Keno jig falls with a slow fluttering action. Distrurb the bottom by jerking a couple of times and then reel-in the line about the 30cm before pausing. Then make long gentle upward pulls on the line raising the jig up and allowing it to free-fall back down before pausing and then repeating this sequence again. Lift, fall ,hold. The special shape and weight of the Keno jig is designed so that when the raising stops it positions itself correctly for the next drop and it is then fluttering back down in another direction.

TIP FOR KENO OPEN WATER CASTING :

When casting from a boat the keno is easy to cast. Cast the jig and allow the lure to fall to your desired depth. The Keno casting jig is fitted with a swivel and split ring to allow unrestricted movement without twisting the line on retrieve.

The jig falls in water with a slow fluttering action. When the line is retrieved the Keno swims with a smooth swaying shimmer from side to side like a life-like fish.

Reel-in the line slowly and sensitively, sometimes pausing and then continuing to reel and then pausing again. Repeat this motion. Sensitively feeling your way and be ready for any touch or bite from fish. By pausing during the retrieve it allows the keno jig to free fall and this movement mimics a small bait fish in distress and arouses interest from fish.

Keno Casting comes with triple hook.

FEATURES:

- » Environmentally friendly zinc material.
- » High grade durable painting.
- » Premium quality plating finish.
- » Contrast colours.
- » Armed with vmc Hi carbon hooks.
- » Keno has its own unique swim characteristic. It falls in water with a slow fluttering action. When the line is jerked the special weighted shape creates a smooth fluttering shimmer movement from side to side just like a life-like fish.
